 disease resistance protein in a plant. The polynucleotides encoding the disease resistance proteins are useful for increasing resistance in a plant to disease, controlling cell death, and conferring resistance to herbicides. They are useful as probes or amplification primers in the detection, quantification, or isolation of gene transcripts. They can be used for recombinant expression of their encoded polypeptides, as immunogens in the preparation and/or screening of antibodies, and in sense or antisense suppression of the polynucleotide in a host cell,
 Sequence
 resistance polynucleotide operably linked to a promoter, or by culturing the plant cell under plant growing conditions to produce a regenerated plant, or by inducing expression of the polynucleotide to modulate the
 and transgenic plants including maize, soybean, sunflower, sorghum, canola, wheat, alfalfa, cotton, rice, barley or millet. The level of disease resistance protein is increased by transforming a plant cell with a recombinant expression cassette which comprises the disease
 Novel isolated maize disease resistance polynucleotide useful for increasing resistance in a plant to disease, controlling cell death, and conferring resistance to herbicides •
 Maize; plant disease resistance; crop; soybean; sunflower; sorghum; canola; wheat; alfalfa; cotton; rice; barley; millet; plant cell death; herbicide resistance; ZmPtil-1; Ptil; Ptol.

 used to screen for agonists and antagonists and to produce antibodies. Diseases diagnosed, prevented and treated include: cancer, inflammation, autoimmunity, allergy, asthma, rheumatoid arthritis, CNS inflammation, cerebellar degeneration, Alzheimer's disease, Parkinson's disease, multiple sclerosis, amylotrophic lateral sclerosis, head injury damage, and other neurological abnormalities, septic shock, sepsis, stroke, osteoporosis, osteoarthritis, ischaemia reperfusion injury, cardiovascular disease, kidney disease, liver disease, ischaemic injury, myocardial infarction, hypotension, hypertension, AIDS, myelodysplastic syndromes and other hematological abnormalities, applastic anaemia, male
 The present sequence represents a 6-Transmembran designated SDR2. SDR2 polypeptides and polypucid diagnosing susceptibility to diseases by detectingene, and can diagnose diseases associated with
 New 6-Transmembrane protein (SDR2) polypeptide and polynucleotide useful as diagnostic reagents and for prevention and treatment of cancer, AIDS and microbial infections

 CC (referred to as open reading frame, ORFX, where X is 1-1149] (see Table 1 cl in the specification). ABM15762 to ABM27252 encode the human ORFX proteins given in ABP00010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated cd disorder in humans, and in the manufacture of a medicament for treating a csyndrome associated with ORFX-associated disorder. ORFX polynucleotide cc sequences can be used in gene therapy. ORFX sequences can be used in the cc treatment of cancer, hyperproliferative disorders, cirrhosis of liver, cc psoriasis, benign tumours, keloid, degenerative disorders related to organ cc useful framentosus, hyperproliferative disorders related to organ cc transplantation, cardiovascular diseases, diabetes mellitus, systemic lupus erythematosus, hypertension, hypothycoidism, cholesterol ester storage disease, various immune deficiencies and disorders, infectious cd disease, autoimmune thyroiditis, myasthenia gravis, graft-versus-host cd disease and autoimmune inflammatory eye disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis, co cuseful for treating burns, incisions, ulcers, for treating osteoporosis, co perfusion injury in various tissues and conditions resulting from the sequence damage.

On the sequence damage.

Qy
 The invention relates to novel genes (AAL34669-AAL37666) and proteins C (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, cantibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and cother cancers of the adrenal gland, bone, bone marrow, breast, cother cancers of the adrenal gland, bone, bone marrow, breast, cother cancers of the solution of the cother cancers of the adrenal gland, bone, bone marrow, breast, cother cancers of the adrenal gland, bone, bone marrow, breast, alleast, alleast, alleast, alleast, crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; comultiple sclerosis, rheumatoid arthritis and ulcerative colitis; condition of the color of the

 cc polypeptide (II) sequences. (I) is useful as hybridisation probes, cc polymerase chain reaction (PCR) primers, oligomers, and for chromosome cc and gene mapping, and in recombinant production of (II). The polypucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of slites expressing (II). (I) and (II) are useful for treating cc disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in cidagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and cc amino acid sequences. ABG00010-ABG30377 represent novel human cc diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed cat for wips, intromby but was obtained in electronic format directly from WIPO cat figures.

 PIM: PHOSPHOTE
 ULTIMATELY THE DEGRADATION OF THE INHIBITOR.
SUBUNIT: PREFERENTIALLY FOUND AS A HETERODIMER WITH IKK-ALPHA BUT
ALSO AS A HOMODIMER. DIRECTLY INTERACTS WITH IKK-GAMMA/NEMO.
HETERODIMERS FORM THE ACTIVE COMPLEX. THE TRIPARTITE COMPLEX CAN
ALSO BIND TO MEKKI, MAPSK14/NIK, IKAP AND IKB-ALPHA-P65-P50

 WEAKLY AUTOPHOSPHORYLATED.
SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.
 SUBCELLULAR LOCATION: Cytoplasmic TISSUE SPECIFICITY: HIGHLY EXPRESS
 COMPLEX.
 FUNCTION: PHOSPHORYLATES INHIBITORS OF NF-KAPPA-B THUS LEADING THE DISSOCIATION OF THE INHIBITOR/NF-KAPPA-B COMPLEX AND
 IKAPPAB KINASE SUBFAMILY.

 diagnostics, forensics, responsible for genetic biodiversity -
 The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The
 New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
 associated subunits (TAF's) are components of the transcription factor TFIID and are thought to mediate transcriptional activation. This encod protein may be produced recombinantly from transformed host cells or purified from human cells. hTAFIII05 specific binding agents such as specific antibodies could be used for diagnosis (e.g. genetic hybridisation screens for hTAFIII05 transcripts), therapy (e.g. gene therapy to modulate hTAFIII05 gene expression) and in the biopharmaceutical industry (e.g. as immunogens, reagents for isolating cell specific activators or other transcriptional regulators).

 diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
 to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for general activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polypucleotide sequences have applications in the formation of annother treating and the polypeptide and polypucleotide sequences have applications in

 Comai L,
Tjian R,
 The TATA-binding protein associated factor hTAFIII30 (including specific antibodies and fusion products) are used in drug screeni diagnostics and therapeutics. They are used in the development especific biochemical assays for screening compounds that agonise antagonise selected transcription factors involved in regulating
 TATA-binding protein associated protein factors corresponding nucleotide sequence and deriv. and in screening, diagnostics and therapeutics
 This represents a polypeptide comprising a (modified) fragment (I) a TATA box-binding protein associated factor II 105 (TAFII105). A pharmaceutical composition comprising (I) or the polynucleotide or inhibitor or antagonist of (I) is useful for treating cancers and inducing apoptosis in pathological cells. The composition is also in the pathological cells.

 The invention relates to purified proteins involved in transcription by RNA polymerase II, the RNA polymerase which transcribes messenger RNA. RNA polymerase II transcription proceeds in vitro upon addition of several nuclear fractions designated TFIIA, B, D, E, F, H, I and to RNA polymerase II holoenzyme. Fraction TFIID has been shown to RNA polymerase II holoenzyme. Fraction of TFIID and separation contains a TBP and other TAFs. Purification of TFIID and separation its components reveals 7 proteins ranging in size from 30-250 kD.
 This is the amino acid sequence of the human TATA-binding protein (TBP) associated factor (TAF) designated TAFIII30. The protein is a component of the TFIID fraction required for reconstituting RNA polymerase II in vitro transcription activity. The encoded protein has an estimated mol.
 Comai

 AAW25018 represents TATA-binding protein associated factor (TAF) polypeptide, hTAFII100 (mol. weight 100kD). TAF peptides derived from hTAFII30 alpha, hTAFII30 beta, hTAFII40, hTAFII70, hTAFII100, hTAFII70, hTAFII70, hTAFII100, hTAFII70, hTAFI are nuclear proteins involved in RNA polymerase I, in and III transcription. The peptides act by binding to a different TAF, an activator, or THP (TATA-binding protein) or compound, typically inhibiting association of a TAF domain with another compound, typically a protein like TBP or another TAF, an activator, or DNA.

 sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers sets can be used in antisense therapy and in gene therapy. The primers sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 represent human amino acid sequences; and AAH13629 to AAH13632 hand and analyse of the comprise of the sequences.

 The invention relates to three polymorphic variants of a rat transcriptional regulatory factor Elf-1 (ARAB03190-B03192) and nucleic acids encoding them (ARAB1645-861647). The invention also encompasses the use of Elf-1 for regulating the transcription of a gene in an expression vector. The cDNA encoding rat Elf-1 variant #1 (ARAB1645) was isolated using PCR primers (ARAB61648-A61649) based on mouse Elf-1 cDNA, and the rat Elf-1 variant #2 and 3# cDNAs (ARAB1646-A61647) were subsequently isolated. The Elf-1 cDNA and protein sequences are potentially useful for the prevention and treatment of immunological and allergic diseases mediated by Elf-1. The present sequence represents a variant (#3) of rat Elf-1.

 Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
 The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptices (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous snjuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as

Example 3; SEQ ID NO 1830; 10078pp; English.

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity, hemotractic/chemokinetic activity, hemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and specification. .N.S disorders. ote: The sequence data for this patent did not torm part of the printed

 Title:
Perfect score:
 Total number of hits satisfying chosen parameters:
 Scoring table:
 OM protein - protein search, using sw model
 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 GENERAL INFORMATION:
 APPLICATION NUMBER: US/08/
FILING DATE:
CLASSIFICATION:
ATTORNEY/AGENT INFORMATION:
NAME: OSMAN, RICHARD A
REGISTRATION NUMBER: 36,62
 30
 COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
 CORRESPONDENCE ADDRESS:
ADDRESSEE: SCIENCE & TECHNOLOGY LAW GROUP STREET: 268 BUSH STREET, SUITE 3200 CITY: SAN FRANCISCO STATE: CALIFORNIA
 REFERENCE/DOCKET NUMBER: B9
TELECOMMUNICATION INFORMATION:
 FEATURE:
NAME/KEY:
 MOLECULE TYPE:
 TITLE OF INVENTION: B-Cell Specific Transcription NUMBER OF SEQUENCES: 2
 APPLICANT: Dikstein, Riv
APPLICANT: Tjian, Robert
